# INTRODUCTION

Epilog Laser's Fusion Pro Series features a variety of table configurations to help you improve workflow and optimize productivity with your laser machine. These tables can be quickly and easily interchanged, depending on your needs. Our grid cutting table is designed for general cutting applications, while our task plate table provides the flattest work surface for engraving jobs. Epilog also offers a slat cutting table ideal for cutting thick and large pieces of sheet material.

## Fusion Pro Tables

### Grid Table

The Grid Cutting Table is ideal for more detailed cutting applications. By limiting how much of the surface area of your piece contacts the worktable, the Grid Cutting Table helps to reduce backside burning and provides greater air circulation while still accommodating smaller sheet stock and finely-cut pieces.

### Slat Table

Designed for larger sheets of material, the Slat Cutting Table with support frame greatly reduces the points of contact between the material you are cutting and the worktable. This significantly reduces backside burning and provides optimal airflow for the removal of dust and debris.

### Task Plate Table

The Task Plate offers you the flattest option for engraving pieces that require the most consistent engraving across a large area. These single panel tables are easily inserted and removed from the machine and are ideal for engraving materials that are very sensitive to focus variation.
